SAFETY MEETING
March 19, 2026
Protecting Products (Seed)

Safety is about protecting:

- People
- Products
- Property
- Environment

Seed spills cost \$ and effect our image

- 5-6 spills in the past month or so
- Spills this week alone have an estimated cost of over \$13,000
 - If these spills were canola, estimated cost would have been over \$150,000
- Better care needs to be taken when filling bins and loading trucks
 - Continuous monitoring needs to happen
 - Watch the truck, the belt or auger, top of the bin and ground around the bin
 - Know how to shut down flow of seed quickly, both at the truck (or bin) and at the belt (or auger)
 - Know where the seed is at in the bin and when the bin is expected to be full
 - Check the bucket placement in the bin before engaging belt or auger
- Clean up spills and keep the yard tidy

Corrective actions:

- Safety meeting (awareness)
- New buckets with quick connects
- Possible raise axil on belt ~ 1 foot?
